

## Statement on Conflict Minerals

As with most electronic products, Elektronik Mekanik's contain various metals, including tantalum, tin, tungsten and gold, (so called '3TG') which originate from around the world. The 3TG metals have become known as 'conflict minerals' because they are sourced in part from the eastern provinces of the Democratic Republic of Congo (DRC).

While we use 3TG in our process, we do not purchase the metals directly from smelters or mines, so we must rely on the source information provided by our suppliers. We are engaged with our direct suppliers to trace minerals back to their origin and ensure responsible sourcing throughout the supply chain. Elektronik Mekanik AB is following a process based on the standardized EICC/GeSI Conflict Minerals Reporting Template:

<http://www.conflictreesourcing.org/reporting-templates/public-reporting/>

Should Elektronik Mekanik AB become aware of a supplier whose supply chain includes metals from a non-conflict free source, we will take the appropriate actions to remedy the situation in compliance with the Rule. We expect our suppliers will do the same so that we maintain alignment with the Rule throughout the entire supply chain.

Elektronik Mekanik AB is a contract manufacturer that in the current situation is not a product owner and thereby control over what items are not to be used in customers' products.
